

Revision 2.C Release Date July 11 2007

Revision Notes - updated new format

Technical Specifications Summary

| | | | |
|------------------|--------------|--------------------|------------|
| Frequency Range: | 88 - 108 MHz | Gain: | 18 dB |
| P1dB: | 750 Watts CW | Efficiency: | 68% |
| Class: | C | Temperature Range: | +0 to 60°C |
| Supply Voltage: | +50.0V | Max VSWR: | 5:1 |

Amplifier General Description

The P750-FM-18 is an integrated amplifier building block which requires only power, input and output connections. This highly cost effective amplifier has been designed for FM radio transmitter integrators and gives a great deal of flexibility. A low loss Wilkinson input splitter and output combiner puts together two push-pull transistor pairs, guaranteeing good overall circuit performance at an attractive price. This amplifier is MOSFET based.

- **No RF assembly or Circuit Tuning!**
- **750 Watts Min Output Power!**
- **18dB Typical Gain at 108MHz!**
- **Amp Disable!**
- **Priced below \$1 USD / Watt!**

| Parameter | Min | Typ | Max | Units | Notes |
|---------------------------------|-----|-------|-------|-------|--------------|
| Frequency | 88 | | 108 | MHz | |
| P1dB | | 750 | | W, CW | |
| Psat | | | 800 | W, CW | |
| Power Input | 12 | 14 | 18 | W, CW | |
| Gain | 16 | 18 | | dB | |
| Vsupply | | +50 | | V, DC | |
| Drain Current | | 22 | | A, DC | |
| Input VSWR | | 1.3:1 | 1.5:1 | | |
| Insertion Phase Variation | | ±5 | | ° | Unit to unit |
| Gain Variation | | ±1 | | dB | Unit to unit |
| F2 Second Harmonic | -40 | -50 | | dBc | |
| F3 Third Harmonic | -20 | -24 | | dBc | |
| Baseplate Operating Temperature | -0 | | +60 | °C | |

Physical Dimensions 10" x 4" x 1.5" / 25cm x 10cm x 4cm

All specifications valid for 50 Ω output load, $V_{sup} = +50VDC$, $I_{dq} = 0.2A$

Absolute Maximum Ratings

| Parameter | Value | Units | Notes |
|--------------------------------------|-------------|-------|-------|
| Maximum Operating Voltage | +55.0 | VDC | |
| Stable Operating Voltage | 46-52 | VDC | |
| Maximum Bias Current, Per transistor | 2 | A | |
| Maximum Drain Current | 28 | A | |
| Load Mismatch Survival | 5:1 | | |
| Storage Temperature | -40 to +105 | °C | |
| Maximum Operating Baseplate Temp | +65 | °C | |

Features, Auxillary Functions

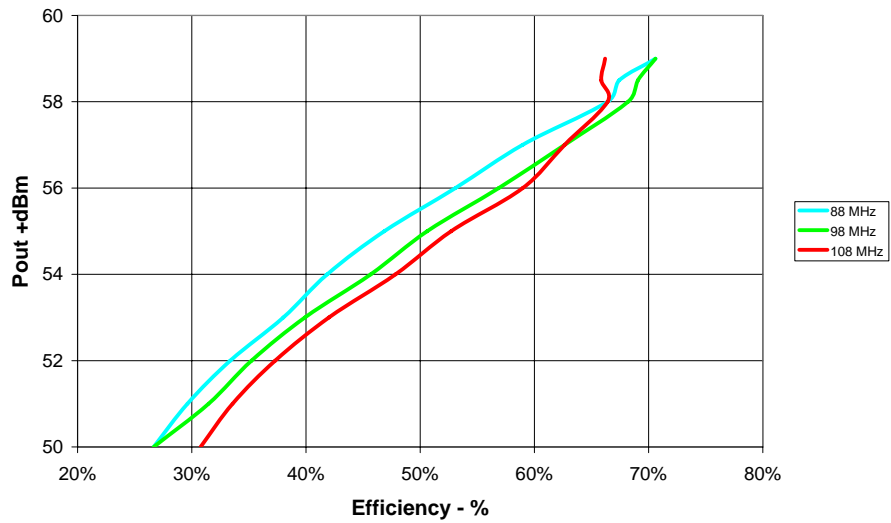

- Amplifier Disable
- Current Sense, Each Transistor
- Connectorized Power

Pin vs. Pout

Pout vs. Efficiency

Use of cooling air on top of pallet to keep output transformers cool is recommended. Output transformers are rated for continuous operation at 150C, ceramic resistors 180C. Keep any external circuitry away from input and output combiners to avoid any interference - give at least 1.5" clearance to avoid creating feedback paths.

NOTE: Power connections must be soldered to pallet. Connector is rated for 25A maximum.

Connections:

Connect amplifier to +Vsup and Ground using either 3.0mm modular 10-position plug (J100) (25A Maximum) or soldering directly to pads adjacent to connector - preferred method. If using Single connection, 10 gauge wire is recommended, 10 gauge ground wire. 20 gauge wire is recommended for use in modular connector, and all power connections must be used! In all cases, use of teflon insulated wire is highly recommended.

Connect coaxial cable to input and output RF connections (semi rigid or flexible) using best RF practices. Ensure output cable is of sufficient power handling rating. Pads are provided for ground on co-axial connections.

Amplifier Startup

+Vsup should be applied to amplifier with no drive and the amplifier disabled. The system must allow drain voltage to reach +26V minimum before enabling bias and applying drive or damage will result to the amplifier and void the warranty. This typically takes between 2 - 10 seconds and should be verified by the system integrator.

Bias Current:

Bias has been pre-set at the factory to 0.1A each transistor at +50.0V DC. This bias point has been selected to offer the optimum balance between gain and efficiency. This unit is intended for class C operation. If the bias point is changed, take great care not to exceed the maximum bias listed on page 1.

Amplifier Shutdown

To prevent damage to amplifier and surrounding systems, bias and drive should be removed prior to powering down PA. This can be accomplished by applying Ground to DISABLE. Power can safely be removed from PA. Please note that as with any class C amplifier, even when disable is applied, the output of the amplifier can still be active. This should be driven with an open collector circuit so a high impedance is presented to the bias point when the amplifier is enabled. Placing any voltage at this point can alter the bias setting.

Miscellaneous:

Placing noisy analog or digital systems, such as additional control circuitry, directly over the top of transistors or RF path can cause improper operation. Care should be taken to locate these components where they will not cause interference.

Solder Pad +Vsup for Transistor A

Solder Pad +Vsup for Transistor B

Tips for Mechanical Mounting:

- 1 All holes are clear for #6 Screw. Stainless Steel mounting hardware is recommended, grade 18-8 or better. A lock washer of same material should also be used.
- 2 Ensure mounting surface is flat to better than 0.003" / "
- 3 Use a thin layer of thermal compound on the backside of the PA - no more than 0.001" - 0.002" thickness!
- 4 Torque all screws to 10-12 in-lbs

Ordering Information:

| Order Code | Description | DRFT Reference |
|----------------|--|----------------|
| P750-FM-18 | 750W FM Broadcast Amplifier | 1737 |
| Options | | |
| -A11 | SMA Female Connectors In / Out | 0201 |
| -A12 | Heat Sink Option | 0202 |
| -A13 | Heat Sink Option with DC Fan, pre wired | 0203 |
| -A14 | Ruggedized for vibration | 0204 |
| -A15 | Wire harness, 1' length, 10 wires for pallet amplifier only (NON-FM) | 0205 |
| -A16 | Wire harness, customer specified length for pallet amplifier only | 0206 |
| -T2 | Extended Burn In | 0271 |
| -T3 | Extended Data Collection | 0272 |

Standard Pallet Options:

SMA Female Connectors, Input and Output. Stainless Body, Gold Center pin, 4-hole SMA bolted to pallet amplifier edge through bottom two holes located at amplifiers RF IN and RF OUT locations. All stainless steel hardware.

Enclosure- all aluminum machined enclosure available for most pallet amplifiers. Alodined aluminum, alloy 6061-T6. SMA Female input and output RF connectors. Supply voltage and ground through solder / feedthrough connections. Module must be bolted to appropriate heatsink.

Heat Sink - aluminum extruded heat sink, black anodized. Pallet amplifier or module will be bolted to heatsink. Customer will be required to provide adequate airflow.

Heat sink with fan - aluminum extruded heat sink as above, with included fan bolted to push air through the heat sink. Depending on heat requirements, a second fan may also be provided on the output of the unit.

Ruggedized - all screws have threadlocking compound applied, and all flying components are staked and attached to base. Designed to withstand MIL-STD-810E 514.4 Category 8.

Power Connector - a 10 pin molex connector is used on all standard pallet amplifiers to supply +Vsup and Ground connections, as well as hi-side current shunts for current monitoring. Delta RF offers the mating connector with 1' wires - Red (Vsup), Black (Ground), Yellow (Current monitor). All wires are 18 gauge teflon insulated wires. Customer may optionally specify wire length and wire color.

Testing Options:

Standard - includes power test and brief burn - in under laboratory conditions. Printed test report gives graph of Gain and Input Return Loss at rated P1dB and Voltage Conditions. Report shows pass/fail criteria. All amplifiers include this test.

Extended burn in - 8-hour burn in at P1dB with standard test run at completion. Unit is monitored during test and any discrepancy reported. Standard test data is included.

Extended data collection - Standard data is run and included. Detailed data is taken point by point giving the customer 25 - 70 frequency points, depending on the amplifier model. For each frequency point, data is generated to include gain, input power, input return loss, current, second harmonic, third harmonic, efficiency, audio distortion.

Other tests available - Vibration, Temp cycling, Shock. Please inquire.
